Immediate Joiner

PROFESSIONAL SUMMARY

AWS / Cloud DevOps Engineer with 3 years of hands-on experience in building and managing CI/CD pipelines, cloud infrastructure, containerized applications, and Kubernetes workloads. Strong experience with AWS services (EC2, EKS, VPC, IAM, S3, RDS), Jenkins, Docker, Kubernetes, Terraform, and Ansible. Currently working in a **production DevOps role at RichPe FinTech Pvt. Ltd.** managing AWS cloud infrastructure, server administration, Nginx/Cloudflare configuration, SSL/TLS certificate management, and backup/recovery for live fintech applications (LOS, CRM, BUERO, BRE, API Hub, Bureau Analyser). Improve release efficiency, and troubleshoot production issues. AWS DevOps Engineer as an immediate joiner.

TECHNICAL SKILLS

Version Control	: Git, GitHub
CI/CD Tools	: Jenkins
Build Tools	: Maven
Containers & Orchestration	: Docker, Kubernetes
Infrastructure as Code	: Terraform
Operating Systems	: Linux, Red Hat, Windows, Ubuntu
Monitoring Tools	: Prometheus, Grafana, CloudWatch
Code Quality & Artifacts	: SonarQube, Nexus
Cloud Platform	: Amazon Web Services (AWS)
Cloud Services	: EC2, VPC, IAM, S3, RDS, ALB, Auto Scaling, CloudFront, Route 53, Lambda, CloudWatch, SNS, CloudTrail, Event Bridge
Networking & Security	: Cloudflare, DNS, SSL/TLS, HTTPS, Security Groups, SSH, OpenVPN, Nginx
Application Stack	: Node.js, npm, Vite, PostgreSQL, Redis
Scripting	: Shell Scripting, Python, YAML, JSON
Project Management	: Jira

EXPERIENCE

DevOps Engineer — RichPe FinTech Pvt. Ltd.

May 2026 – Present

Projects: LOS, CRM, BUERO, BRE, API Hub, Bureau Analyser

Responsibilities :

- Provisioned, configured, and managed AWS EC2 servers for fintech production and application environments.
- Configured Application Load Balancer (ALB) and Auto Scaling to ensure scalability and high availability of applications.
- Used Amazon S3 for application/data storage and set up backup and recovery infrastructure for LOS/Malwa data.
- Configured Amazon CloudFront for content delivery and Amazon Route 53 for DNS and domain routing.
- Built serverless automation and background tasks using AWS Lambda.
- Configured Amazon CloudWatch for monitoring, logging, and alerting, and Amazon SNS for notifications.
- Managed Nginx reverse proxy and web server configurations for frontend and backend applications.
- Handled SSL/TLS certificate procurement, installation, and Nginx configuration for production domains.
- Worked with Cloudflare for DNS, proxy/CDN, SSL/TLS, and domain management.
- Administered Ubuntu/Linux servers, including security groups, SSH access, and HTTPS/OpenVPN configuration.
- Deployed frontend and backend applications using Git/GitHub, Node.js, npm, and Vite.
- Worked with PostgreSQL and Redis as part of the application infrastructure.
- Performed production troubleshooting using Linux CLI, curl, Nginx configuration/logs, and AWS monitoring tools.

Client: Cognizant | Project: MetLife APPS (Auto Policy Processing System)

Technologies: Git, GitHub, Jenkins, Maven, Docker, Kubernetes, Ansible, Terraform, Prometheus, Grafana, AWS

Description :

MetLife APPS is a large-scale web-based insurance claims processing system built using cloud-native architecture. Responsibilities included CI/CD automation, containerization, infrastructure deployment, and AWS cloud management.

Responsibilities :

- Designed and maintained end-to-end CI/CD pipelines using Jenkins, Git, Maven, SonarQube, and Nexus, reducing manual deployment effort by 60%.
- Containerized applications using Docker and deployed microservices on Kubernetes (EKS) with rolling updates and zero-downtime deployments.
- Provisioned and managed AWS infrastructure using Terraform and Ansible, ensuring consistent DEV, QA, and UAT environments.
- Implemented monitoring and alerting using Prometheus, Grafana, and AWS CloudWatch to improve system visibility and uptime.
- Configured and managed AWS services including EC2, VPC, IAM, S3, RDS, Lambda, Route 53, and CloudTrail.
- Automated environment setup and routine operational tasks using Ansible playbooks and shell scripts.
- Troubleshoot build failures, deployment issues, Kubernetes pod crashes, and Linux OS-level problems.
- Collaborated closely with development teams to improve release cycles, deployment stability, and delivery speed.
- Documented CI/CD workflows, infrastructure architecture and deployment procedures for team knowledge sharing.
